Key Skills

AI-assisted development

Software architecture

Systems Thinking

Product-Oriented Engineering

HTML5, CSS

React, Redux, NextJS

JavaScript, TypeScript

NodeJS (express, NestJs)

Testing (unit, e2e, Jest, Cypress)

Web3 development

Git

AWS

Docker, docker-compose

Django

Linux CLI

Summary

Full-Stack Developer with 10+ years of experience designing and delivering scalable web, fintech, and DeFi applications across startups and global enterprises. Proven track record of architecting event-driven systems, building payment and blockchain infrastructure, and shipping high-impact features across frontend, backend, and smart contract layers. Combines strong software architecture and systems-thinking skills with a product-oriented mindset, consistently turning complex business goals into reliable, maintainable technology. Comfortable operating autonomously in remote, cross-functional teams and leveraging AI-assisted development to accelerate delivery.

Experience

ONCHAIN® Labs / Full-Stack Developer

February 2024 — February 2026 (2 years)
Global / Remote position / Contract
www.onchain.money

ONCHAIN® is a DeFi-first payment rail startup building infrastructure that enables seamless cryptocurrency purchases, smart treasury optimization, and gasless transactions using account abstraction.

Tech Stack: TypeScript, NestJS, React, Google Cloud Platform (GCP), Postgres, Hardhat, Solidity, ERC-4337

Designed and implemented a full-stack, event-driven crypto payments infrastructure, contributing across architecture, backend, frontend, and smart payloads that execute users' operations.

- Built a system enabling users to purchase tens of thousands of cryptocurrencies via credit/debit card, including on-demand liquidity acquisition and secure routing of assets to user wallets.
- Contributed to treasury optimization algorithms that dynamically manage and allocate funds across multiple chains, allowing the company to operate efficiently with minimal capital exposure.
- Developed seamless wallet creation flows (via Privy), delivering a banking-like UX while preserving self-custodial ownership principles.
- Enabled token transfers from custodial purchase flows into user self-custodial wallets.
- Developed a subscription and payments engine allowing merchants to set prices in USD while dynamically calculating and charging equivalent amounts in supported cryptocurrencies at execution time.
- Implemented ERC-4337 (Account Abstraction) to enable gasless transactions, allowing users to pay transaction fees in the same currency they are transferring — creating an experience comparable to modern fintech apps.
- Engineered an event-driven backend architecture using NestJS and GCP services to ensure scalability, reliability, and transactional integrity across payment and blockchain flows.
- Contributed to smart contract development and testing using Solidity and Hardhat, and built and maintained React-based frontend applications integrating blockchain and payment infrastructure.
- Developed internal developer tools that accelerated incident

Other Skills

Docker, OpenAPI, GraphQL, Vue, REST API development, CI/CD, Statistics and Deep Learning with Python, C++11, C#, Microservice architecture, Micro frontends, Scrum/Agile

detection, system diagnostics, and high-confidence experimentation with new DeFi functionality.

Lysn / Full-Stack Developer

August 2021 — August 2023 (2 years)
Australia / Remote position / Contract
www.welysn.com

Lysn serves as a mental health platform linking therapists and clients. It facilitates online booking and hosting of consultations, along with providing tools for practitioners to handle associated documentation.

Tech Stack: React, Redux-Saga, TypeScript, Micro Frontends, Python, Django, CircleCI, Docker, AWS, PostgreSQL, Trello

- **Implemented micro frontends architecture** to **enable progressive code refactoring and upgrades of the technological stack** and **speed up load times** of the customer application
- Refactored pricing logic to **enable advanced, configurable pricing capabilities**
- Brought know-how to Australia from the overseas team and upskilled local team to **ensure a smooth business transition to the next phase**
- **Rapidly acquired proficiency in Django** to drive project progression without a need to rely on overseas team
- Successfully identified and **swiftly resolved critical P1 issues.** Made quick **decisions** to retrieve information directly from the database to **ensure business operations continued** while the systems were down
- Implemented Medicare Gap payments to in**crease business revenue** and **minimize the risk** of no-show consultations

The Institute of Data / Curriculum Writer

June 2021 — August 2021 (2 months)
Australia / Remote position / Contract
www.institutedata.com

The Institute of Data specializes in accelerated workforce training for the industries of the future, focusing on areas such as cyber security, big data, artificial intelligence, and the digital economy.

Tech Stack: React, NodeJS

- Prepared **syllabus and teaching materials** for an online course on web development with **React** and **NodeJS**

uDrew / Full-Stack Developer

September 2020 — March 2021 (7 months)
Australia / Remote position
www.udrew.com.au

uDrew is a Building Technology company that provides interactive solutions to streamline the Design, Planning and Approval of residential building projects.

Tech Stack: React, Redux, Typescript, NodeJS, Docker, Microservice

architecture, Micro Frontends, PostgreSQL, PostGiS, CircleCI, AWS, Slack API

- Created a system for **dynamic, configurable data collection flows** that is at the core of streamlining the approval of building projects
- Developed document management system using **AWS S3** that ensured that business has auditable information about all the file uploads
- Improved **Typescript** handling in the frontend applications to enhance code maintainability and **speed up development process**

Officeworks / Full-Stack Developer

January 2020 – August 2020 (8 months)
Melbourne, Australia / Remote position / Contract
www.officeworks.com.au

Officeworks is Australia's largest supplier of home & office products and the biggest e-commerce business in Australia.

Tech Stack: React, Redux, NodeJs, Adobe Target, Microservice Architecture, Micro Frontends, Jenkins, PostgreSQL, AWS, Contentful, Algolia

- Introduced team workflow that **streamlines the flow of work** between developers and QA team that reduced wait time developers have to wait for available QA person to 0
- **Fixed** problems with displaying correct content using **Adobe Target** to ensure that marketing materials targeting the right audience are displayed and increase conversion
- **Scoped** and **developed** recurring items capability to increase sales through allowing businesses to automatically purchase products on recurring basis

Highsnobiety / Full-Stack Developer

October 2018 – January 2020 (1 year 3 months)
Berlin, Germany / Remote position
www.highsnobiety.com

Highsnobiety, a global fashion and lifestyle media brand and e-commerce.

Tech Stack: React, Redux, NodeJS, Microservice Architecture, TravisCI, CircleCI, GCP, CommerceTools, DataDog

- **Built core parts of the e-commerce experience, including the product detail page and checkout flow, on a CommerceTools-based stack**
- **Designed and built endpoints to handle sales of highly limited, exclusive stock, ensuring security and reliability under heavy, spiky traffic**
- **Re-engineered the React application startup so correct pricing and content always rendered, with no flashes of unexpected or stale items**
- **Wrote CI pipelines for TravisCI and CircleCI, and maintained Docker containers and Terraform scripts on GCP**
- **Ensured error-free deployments through high-quality unit and end-to-end tests**

DisplaySweet / Full-Stack Developer

March 2017 – September 2018 (1 year 5 months)
Melbourne, Australia

DisplaySweet specializes in the interactive showroom and presentation

experience, combining experiential technology with property marketing to enhance the customer experience and deliver commercial results.

Tech Stack: React, Redux, FlowTyped, NodeJS, C#, .NET, PostgreSQL, AWS, OpenCV, PyTorch

- Created solutions for the real estate industry that enhances the sales process of the off-the-plan apartments. This includes overseeing sales agents and providing software for organizing and conducting live sales events.
- Rapidly prototyped multiple solutions with the use of a variety of modern technologies (**React, Deep Neural Networks, Computer Vision, Dialogflow, IFC, React Native, BabylonJS**) to assess feasibility and allow the sales team to present new capabilities to existing and potential clients

Nokia Networks / Software Engineer

August 2013 – September 2016 (3 years 1 month)
Wrocław, Poland

Nokia Networks is a global telecommunications infrastructure provider, specializing in delivering end-to-end networking solutions for service providers, enterprises, and industries.

Tech Stack: C++, protobuf, Jenkins, HTML, CSS, Python, MySQL

- Improved project management and error handling flow by creating a **web application for tracking and visualizing problems** reported throughout the company
- Created **a web-based tool** for visualizing logs in the browser. Allowing linking, sorting and intertwining log entries from different log types that enabled teams to **quickly find information in gigabytes-long logs**
- Enabled company transition into 4.5G era by collaborating on specification of **system-level features** as a part of a **multinational specification** group, **developing software** and **software architecture** and operating **cross-department feature integration team**
- **Analyzed gigabytes-long logs** to identify root causes of unexpected system behaviours and contributed to planning fixes in a multi-department architecture.

Education

Wrocław University of Science and Technology

Master's degree / 2014 – 2016, Wrocław
Computer Science, GPA – 5.0 / 5.0

Thesis: Classification methods in automatic speech recognition

Wrocław University of Science and Technology

Engineer's degree / 2010 – 2014, Wrocław
Control Engineering and Robotics, GPA – 5.0 / 5.0

Thesis: Remote control with speech recognition

Awards & Recognitions

GovHack 2017 – Community Environment Data – Award

Issued by GovHack – Victorian Government · Sep 2017

Environment Protection Authority · Sep 2017 Built "Litterly Awesome," a crowd-sourcing app that gathers data on litter (type, location, brand) and combines it with government open data to surface littering trends and the factors driving them.
https://2017.hackerspace.govhack.org/project/litterly-awesome

RegHack Downunder 2017 – Sharenergy – 1st Prize

Issued by RegHack Downunder – Blockchain Association of Australia · May 2017

"Sharenergy" in under 40 hours: a model letting communities run an internal energy market that benefits households with and without rooftop solar, along with the regulatory framework to enable it.
